

Gender Bias in LLM-Generated Children's Stories: Comprehensive Summary

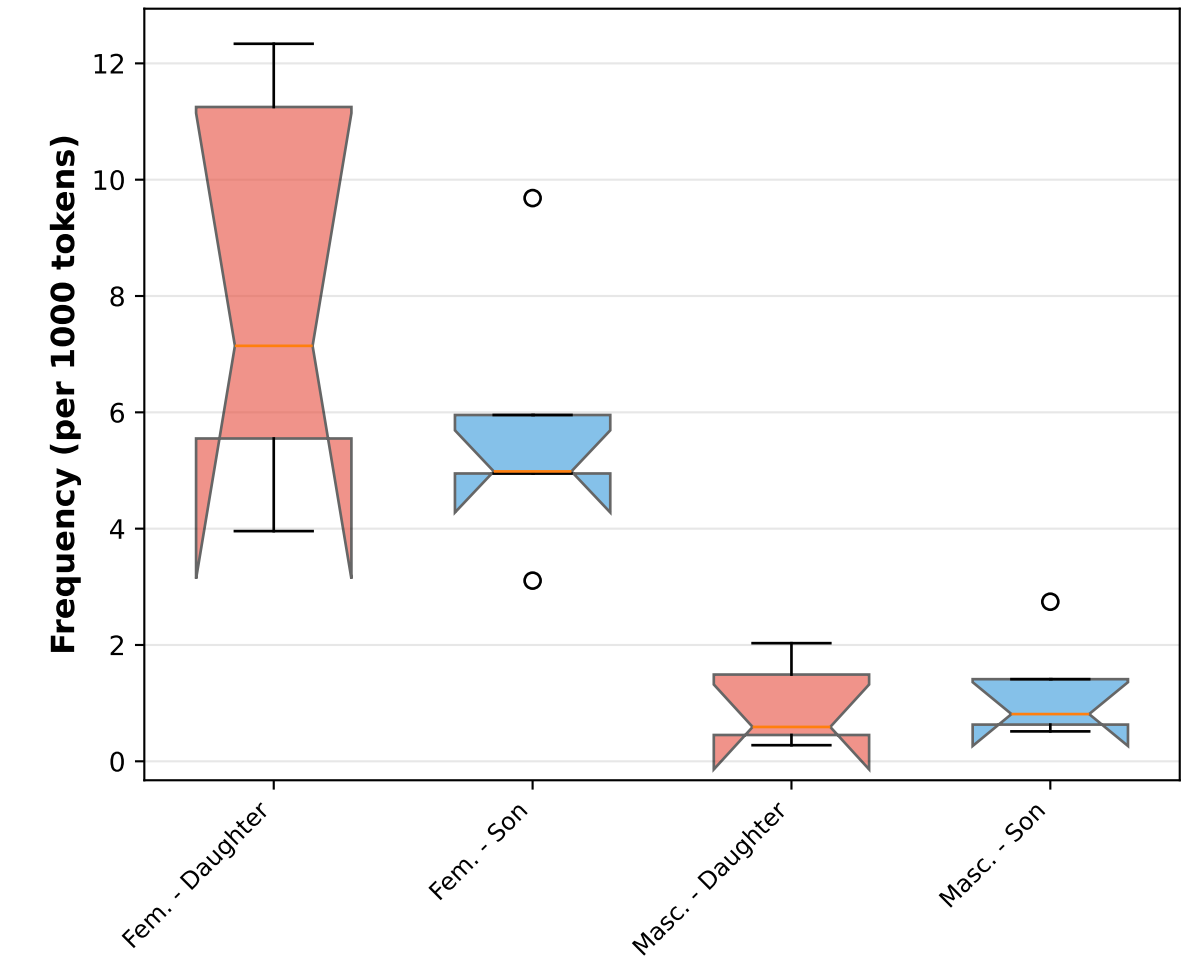

(A) Stereotype Scores by Model

(B) Effect Sizes (Cohen's d)

(C) Trait Distribution Across Models

(D) Summary Statistics

STATISTICAL SUMMARY

Total Comparisons: 65

Significant (FDR $p < 0.05$): 40 (61.5%)

Significant (Bonferroni): 31 (47.7%)

Effect Sizes:

Large ($|d| > 0.8$): 20

Medium ($|d| > 0.5$): 2

Key Findings:

- All models show significant gender stereotyping
- Strongest bias in gender markers (Cohen's $d > 3.0$)
- Moderate bias in traits/roles (Cohen's $d = 0.3-0.7$)
- No bias in career/family domains

Models ranked by bias:

- GPT-OSS-120b (highest)
- Llama-3.3-70b
- Qwen-32b
- Llama-3.1-8b
- GPT-OSS-20b (lowest)
